

Traveler Supply Exchange

As a traveler, I need the ability to offload, or pick up items that I use on a trip, but didn't bring with me and don't want to keep.

Use case 1: I'm on a beach vacation, and I want to spend a couple nights camping. I could do it if I had a tent and a sleeping bag. However, I'd rather not use my travel budget toward purchasing an expensive setup. I can use Traveler Supply Exchange to see if anyone has equipment up for grabs.

Use case 2: Now that my vacation is coming to an end I no longer need my sleeping bags and tent. Taking them home with me is not an option. I can use Traveler Supply Exchange to relist the items see if anyone could use them.

As the product designer, I want to ensure that Traveler Supply Exchange is a safe and simple way for travelers to procure items without compromising their trip.

- explicitly communicate that this site is not for sale and purchase of items.
 - Remind users to meet for exchanges in well lit public areas, and never at their room/airbnb
 - Remind users that if the item is illegal to have in the country it is illegal to exchange on TSE

As the product owner, I want features that enable TSE to grow into free market where we encourage users to keep items in the TSE ecosystem.

- Items exchanged multiple times show an indicator for how many times it has reentered the ecosystem
 - Items can be tracked back to the original owner
 - Users have profiles showing what items they've exchanged and where.
 - Users can track items they've put into the ecosystem, and see where in the world it is now if item is still being exchanged.
 - Users get in achievements for
 - Adding items to the ecosystem
 - Items added that have been exchanged x amount of times
 - Consistently returning items
 - Consistently returning items in the same or better shape than received.
 - Having an original request for an item that later is routinely exchanged in the ecosystem.

Edge cases:

- What if an exchange goes wrong, like someone asks for money, is a no call no show?
 - Include a way to report a negative exchange
- What if a user never puts an item back into the ecosystem
 - It's expected. However, we will prompt the user to return the item or explain why (maybe the item had limited use)
 - This is a reason we might consider asking the original owner during listing if the item is consumable
 - What if a user needs to leave before the item is picked up?
 - Recommend that they leave it with their accommodation's lost and found, donate it or dispose of it properly.
 - In the future we can have designated spaces where items can be picked up and dropped off.

Things to incorporate.

- Splash screen that shows the full vertical version of the logo for no more than 3 seconds while app loads.
 - Start page that shows
 - the search,
 - below the search show a list of "items available in your area"
 - Item
 - Private message screens that allow users to dm each other about items
 - Profile page Views
 - Other persons profile
 - User's Own profile
 - Item page additions
 - Item origin showing date it entered the app, how many previous owners, original poster
 - Section for things you've borrowed in the location you're in
 - You borrowed this · Return or pass on?
 - Tap to open in bottom sheet, has option to pass it on
 - If user opts not to pass it on, show quick multi select list asking why
 - Multi select items should include:
 - Keeping
 - Item consumed
 - Item is no longer usable and beyond repair.
 - Passed along off app

- Other

Seed info for prototype

- User is in Waikiki, HI
- User has
- Items available in their area (each bullet is one listing)
